DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 - 20, drawn to a module, classified in class 209, subclass 399.
 - II. Claims 21- 40, drawn to the method of producing, classified in class 209, subclass 399.
 - III. Claims 41 and 42, drawn to the support frame, classified in class 209, subclass 405.
 - IV. Claims 43-48, drawn to the post, classified in class 209, subclass 409.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a screen for a window with the limitations of the claim for supporting the screen on the window frame. See MPEP § 806.05(d).
3. Inventions I and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as a screen for a window with the limitations of the claim for supporting the screen on the window frame. See MPEP § 806.05(d).

Art Unit: 3653

4. Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as a sign post which has two slots. See MPEP § 806.05(d).

5. Inventions I and II are related as process for producing the module and apparatus. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case invention II (method of producing) requires limitations which the module (I) does not such as the support frame being interlockingly mountable to the post. The module (I) does not require this limitation, only requiring the screening member to be interlockingly mountable to the post. Therefore the system could be practiced with a method/process omitting this limitation.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

7. Because these inventions are distinct for the reasons given above and the search required for each group is not required for the other groups, restriction for examination purposes as indicated is proper.

8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 3653

9. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
